

Gulfstream I, II, III training...

FlightSafety
international

**Gulfstream
Learning
Centers**

As the authorized training organization for Gulfstream American Corporation, FlightSafety International conducts initial and recurrent pilot and maintenance technician training for Gulfstream II and Gulfstream III business jets, and Gulfstream I and Gulfstream IC turboprops. The primary center for Gulfstream training is FlightSafety's Learning Center in Savannah, GA. Gulfstream I and II training is also conducted at FlightSafety's Houston, TX. Learning Center.

Classrooms are equipped with a complete range of training aids including animated systems trainers, mockups, cutaways and working models. Instructor podiums provide fingertip control of classroom lighting and rear projection film and 35mm slide systems. Classroom instruction explains aircraft systems and operating procedures, introduces problems and explains the logic behind solutions to problems.

Learning centers have self-learning facilities where attendees can review subjects of special interest or take supplemental professional courses as they desire.

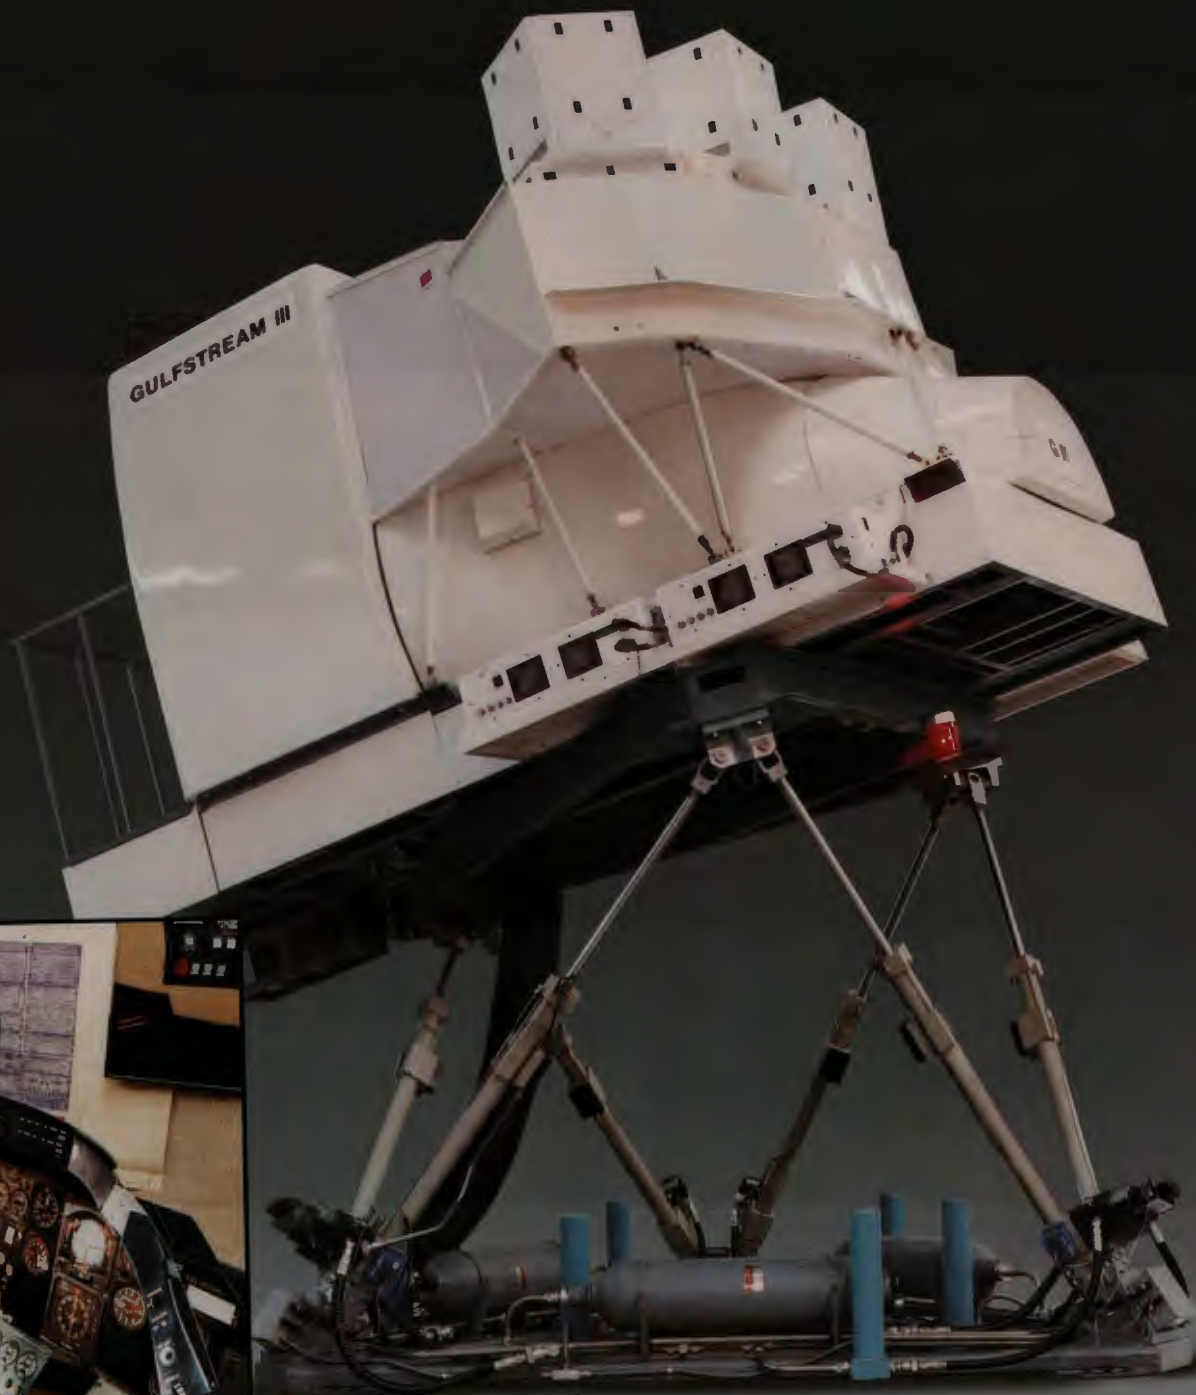

Cockpit procedures trainers and sophisticated flight simulators provide the vital link between knowledge gained in the classroom and the safe efficient operation of the aircraft in today's demanding flying environment.

FlightSafety's Gulfstream simulators are equipped with motion and full color visual display systems. They realistically duplicate every phase of flight. In fact, FlightSafety's new Gulfstream III simulator is the first simulator for a business aircraft designed to comply with FAA requirements for Phase II airline requirements.

Crews can practice and perfect crew coordination, flight management, maximum performance and proficiency maneuvers without exposure to accident.

Consider these important benefits of FlightSafety Gulfstream simulator training:

■ **SAFETY** — Pilots can practice and perfect all normal and abnormal operating procedures in a realistic flight environment under safe and controlled conditions.

■ **FUEL SAVINGS** — Simulators burn no turbine fuel. The high fuel consumption of multiple approaches and low altitude, high power maneuvering is eliminated.

■ **COST EFFECTIVENESS** — Aircraft training can be eliminated. The aircraft remains available for productive transportation. Costs of the heavy wear and tear and engine temperature cycles associated with in-flight training are avoided.

■ **TRAINING EFFECTIVENESS** — Pilots learn more in an hour in the simulator than an hour in the aircraft. There are no weather or ATC delays or noise restrictions in the simulator, improving both aircraft and crew schedule effectiveness.

Gulfstream pilots and maintenance technicians benefit from FlightSafety's close relationship with Gulfstream American. Personnel from both companies are dedicated to insuring that training is comprehensive, complete and that the full resources of the manufacturer are available to provide information about the aircraft.

Gulfstream maintenance training courses are scheduled at several locations around the United States to make them even more convenient to Gulfstream operators. Upon request, maintenance training can even be conducted at your own location.

For more than thirty years, FlightSafety International has been the leader in professional aviation training. Today, more than 10,000 pilots from over 2,000 corporations, the military, the FAA and many of the world's airlines rely on FlightSafety training expertise. Even NASA's Gulfstream pilots take their training with FlightSafety.

FlightSafety's Gulfstream training programs are concrete expressions of commitment by FlightSafety and Gulfstream American Corporation to provide the foundation of product support and safety — well trained and proficient crews.
